

Nobile are pleased to launch the eagerly awaited IFS PRO – taking the standard of board/rider connection and comfort to a new level.

The IFS Pro foot bed is the world's first triple-density, moulded pad. With each layer becoming progressively harder, the shock absorbing qualities of the pad "ramp up" through its depth, preventing any possibility of your foot hitting the board, whilst still delivering a firm surface that gives a direct feeling of the board when riding.

Comfort without function isn't enough however, especially if your foot slips out on the first landing. The ergonomically formed IFS PRO features an in-board cant leading from the heel down to the toe, ensuring that upon impact, your foot moves more securely into the strap, and not dangerously out of it. On the front edge, our multi-ridged toe strip helps with grip, whatever your foot size, and the moulded Polyurethane texture under the heels provides traction in all conditions.

Inside the footstrap, a new hot press formed, EVA pad ensures our exact shaping specifications are met in every unit. Integrated inserts inside the foot bed means that there is no exposed webbing or hard materials to rub on your foot – what ever size it's set to. Vertical adjustment on the strap is retained from the original IFS system to ensure the perfect fit for all feet however, adjustment is now taken care of with a new non-stretch, buckle fixing system, which allows micro adjustment with vastly increased ease of use over a Velcro based system.

Finally, the IFS PRO has been built with the environment in mind, shown in its adhesive free construction and 100% recyclable packaging.

The IFS Pro guarantees that every ride is a pleasure with unparalleled levels of comfort and function.
